

At **EcoLogix**, we take pride in helping our clients succeed. From grant writing to project support, we help transform ideas into realities.

Our experts average more than 20 years of experience working directly with federal, state, and local government agencies, industry, academia, environmental organizations, and communities on a wide range of issues including: facility assessment, project implementation, regulatory compliance, public outreach and project funding. Many of our resident experts were managers and practitioners responsible for developing and implementing pollution reduction projects, while others were responsible for managing programs from the funder's side. We see both sides, because we've been on both sides. Let our understanding and experience provide you with additional insight and peer review as you consider and implement projects.

One of our core focus areas is helping our clients develop and implement projects that benefit the environment by reducing air and water pollution. Our project portfolio ranges from diesel emission reduction programs to dredged material solutions, from community engagement initiatives to communications and media relations. We provide technical analysis and subject matter expertise, expanding capacity for our clients. Whether the project is mandated or voluntary, we help make the project manageable.

Turn-Key Services

- **Identifying project opportunities and developing concepts to achieve objectives** – *Let our vision expand yours.*
- **Performing technology and pollution reduction analysis** – *We can help identify options and augment your analysis.*
- **Supporting efforts to obtain funding** – *We can lighten the load by researching grant opportunities, bundling funding options and writing and submitting for you, and performing follow-up reporting and coordination with administrators.*
- **Assessing fiscal policies and priorities** – *Tap into our brain trust. Need funding? We can help find you the money.*

Our unique expertise and experience position the EcoLogix team to assist with challenging project issues from concept to completion. What can we do? Well, what do you need? We can help with overall project development or fill just the gaps in your short-term capacity.

Our strengths will magnify what you do well. Services in the areas of project identification, technology selection, application submission and reporting improve project outcomes. Whether you are looking to apply for Volkswagen Settlement funds, Diesel Emission Reduction Act grants or funding for innovative and beneficial reuse of dredged material, EcoLogix can help you realize your vision.

We thrive by helping clients understand and prepare for evolving policies and regulations, and by identifying funding for their projects. We can help assess pollution impacts, develop projects, and improve operations all in ways that offset your investments. EcoLogix has a proven track record of obtaining a variety of grants on behalf of clients to support these efforts.

About EcoLogix Group

EcoLogix Group is an environmental strategy firm helping clients achieve challenging organizational and project goals. We specialize in managing real and perceived impacts to air, land, water, and people from operational practices and physical development projects, incorporating solutions that appropriately respond to concerns in ways that save our clients time and money, while producing better project outcomes. Our team has vast experience in helping seaports successfully address air quality impacts and other environmental concerns associated with port activity and associated goods movement.

Service Spotlight - Dry Truck Replacement Programs

Ports have established dry truck replacement programs as an effective element of their overall emission reduction strategy. Incentive funding has proven effective in upgrading dry fleets to newer trucks that meet more stringent emission standards. Such programs are popular with the dry truck community, build awareness of emission issues, and strengthen the reliability of the dry fleets serving port customers.

Our approach offers unparalleled support for program participants while ensuring program integrity by verifying scrappage and deployment of cleaner technology.
