

Grant Services

The number of grants available these days can be overwhelming. Grant fatigue is setting in, but funding opportunities aren't slowing down. With so many grants and opportunities, it can be hard for organizations and companies to keep up with them all, compile winning applications and effectively administer the funding once won.

EcoLogix staff are experts in all grant components, averaging more than 20 years of experience working directly with federal, state, and local government agencies, industry, academia, environmental organizations, and communities on a wide range of issues including: facility assessment, project or program implementation, regulatory compliance, public outreach, and project funding. We keep our finger on the pulse of all current and upcoming grant opportunities, helping you identify the best grants to apply for.

Grant Assistance

From researching the opportunities for funding, to managing the application process, to writing application language, to administering awarded funds, including compliance and reporting – EcoLogix Group stands ready to assist you with all your grant needs.

When you apply for government or philanthropic grants, count on our team of experts to help you form a strategy and prepare the language for a competitive application. To increase the likelihood you win funding, we can manage the entire process, from the starting point to submission, including assistance with obtaining pre-registration in Grants.gov.

In a close partnership with your team, we lead the writing and submission of highly technical and involved government grants. We ensure your narrative is strong and we verify that your entire application package meets the rigorous standards laid out by the agency.

Our Approach

When our team of experts begins working on a grant application, we develop a partnership with you, and rely heavily on transparency in communication to write the most impactful application to improve the likelihood of receiving that funding. This is two-way-communication that requires you to provide our team with the relevant information that the application requires as well as us keeping you current with our progress on the application. Our services can range from all-inclusive applications to specific assistance with a program. Final applications are always submitted in a timely manner, following a rigorous schedule that builds-in detailed review time before submission.

Some Examples

Whether you are looking to apply for Inflation Reduction Act grants, Bipartisan Infrastructure Bill grants, Diesel Emission Reduction Act (DERA) grants, EPA Environmental Justice and Environmental Education grants, MARAD Port Infrastructure Development Program grants or other opportunities, EcoLogix can help you realize your vision. Our successes have included awards of over \$40M in federal grant funds awarded over the last 4 years.

Since 2008, EPA has awarded \$12.5 million to the Port of Baltimore to support port-related diesel equipment upgrades. EcoLogix is a key part of the Maryland Port Administration's Grants Team. This grant funding was awarded under eight (8) successful applications submitted by the Grants Team. Our role in this process includes finding and securing private and public sector project partners to participate in the application submission. We also write the narrative and provide estimated emission reduction data.

EcoLogix also led the way in securing funding for our Solar Oyster startup project. As a participant in the [F3 Tech Accelerator Program](#), Solar Oysters was awarded funding for research to assist in validating the Solar Oyster Production System (SOPS) Technology, and then in coordination with the Chesapeake Bay Foundation, Solar Oysters was awarded a grant from the Abell Foundation to fund a position to oversee and manage the operation of the SOPS prototype.

Our team of experts have provided our clients with support in promoting various grant opportunities like the National Coastal Resilience Fund. We also have developed matrix and other tracking databases to ensure that every detail and requirement is addressed in a grant submission. We leave no detail to chance.
